

MODULE 02 PART 1

JOSEPH A. PEÑEVERDE

STATEMENTS	TRUE/ FALSE	EXPLANATION
Programmers and developers are more inclined to consider computer organization over architecture, as the former deals with the instruction sets, memory addresses, and the general rules in creating programs.	FALSE	Programmers and developers are more inclined to consider computer architecture because they must refer to how the instruction sets and they are relying on a set of rules in creating a program.
Generally speaking, computer architecture is preserved in an organization, mainly because manufacturers want to protect the users' software investments.	TRUE	
A cache memory is the same as the main memory, only smaller and slower	TRUE	
A persistent storage is required in a computer system in order for the currently used data to be stored and processed more quickly	TRUE	
Each physical processor chip can have more than one core inside it.	TRUE
